

FLEXSCAN by

WELCOME TO A NEW WORKPLACE.

You can only do your best work if you have the best tools. And we believe that applies to the workstation as well. Our monitors provide everything you'll need for working at home or in the office.

As the impact of digitalisation spreads wider, the number of computer workstations continues to grow along with the requirements of a modern workstation. We work hard day and night to not simply just meet these demands, but to surpass them.

Be it for office applications, accounting, document imaging or CAD, with the FlexScan product line – the centrepiece of EIZO's portfolio – we offer the best solution for each and every workstation. We know exactly what you expect from an EIZO monitor: the best image quality, the best ergonomics and the best features - and you have the right to expect as much. After all, you give your utmost each

and every day - and that's why you deserve the best partner. A partner that constantly sets new standards because they hold themselves to the same high standards as you do. A partner that knows better than anyone what's most important in their field, right down to the last detail

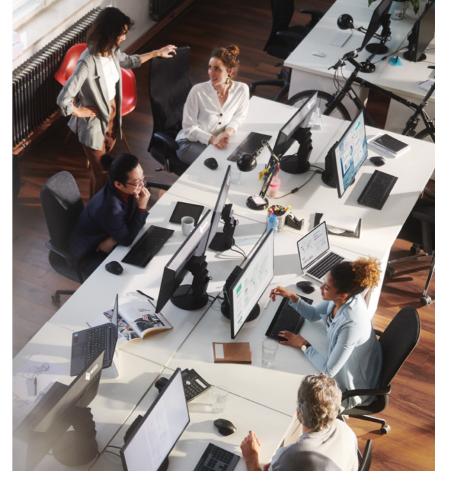

Plus, we don't just continuously develop the best solutions, we also deliver the highest quality - which is why our FlexScan monitors come with a five-year warranty.

And that's why we can make you a simple yet decisive promise:

Working with the best. EIZO.

HOW MUCH PROGRESS HAS YOUR COMPANY MADE IN TERMS OF DEVELOPING THE WORKSTATION OF THE FUTURE?*

A relatively large amount/a great deal

In the early stages/making progress

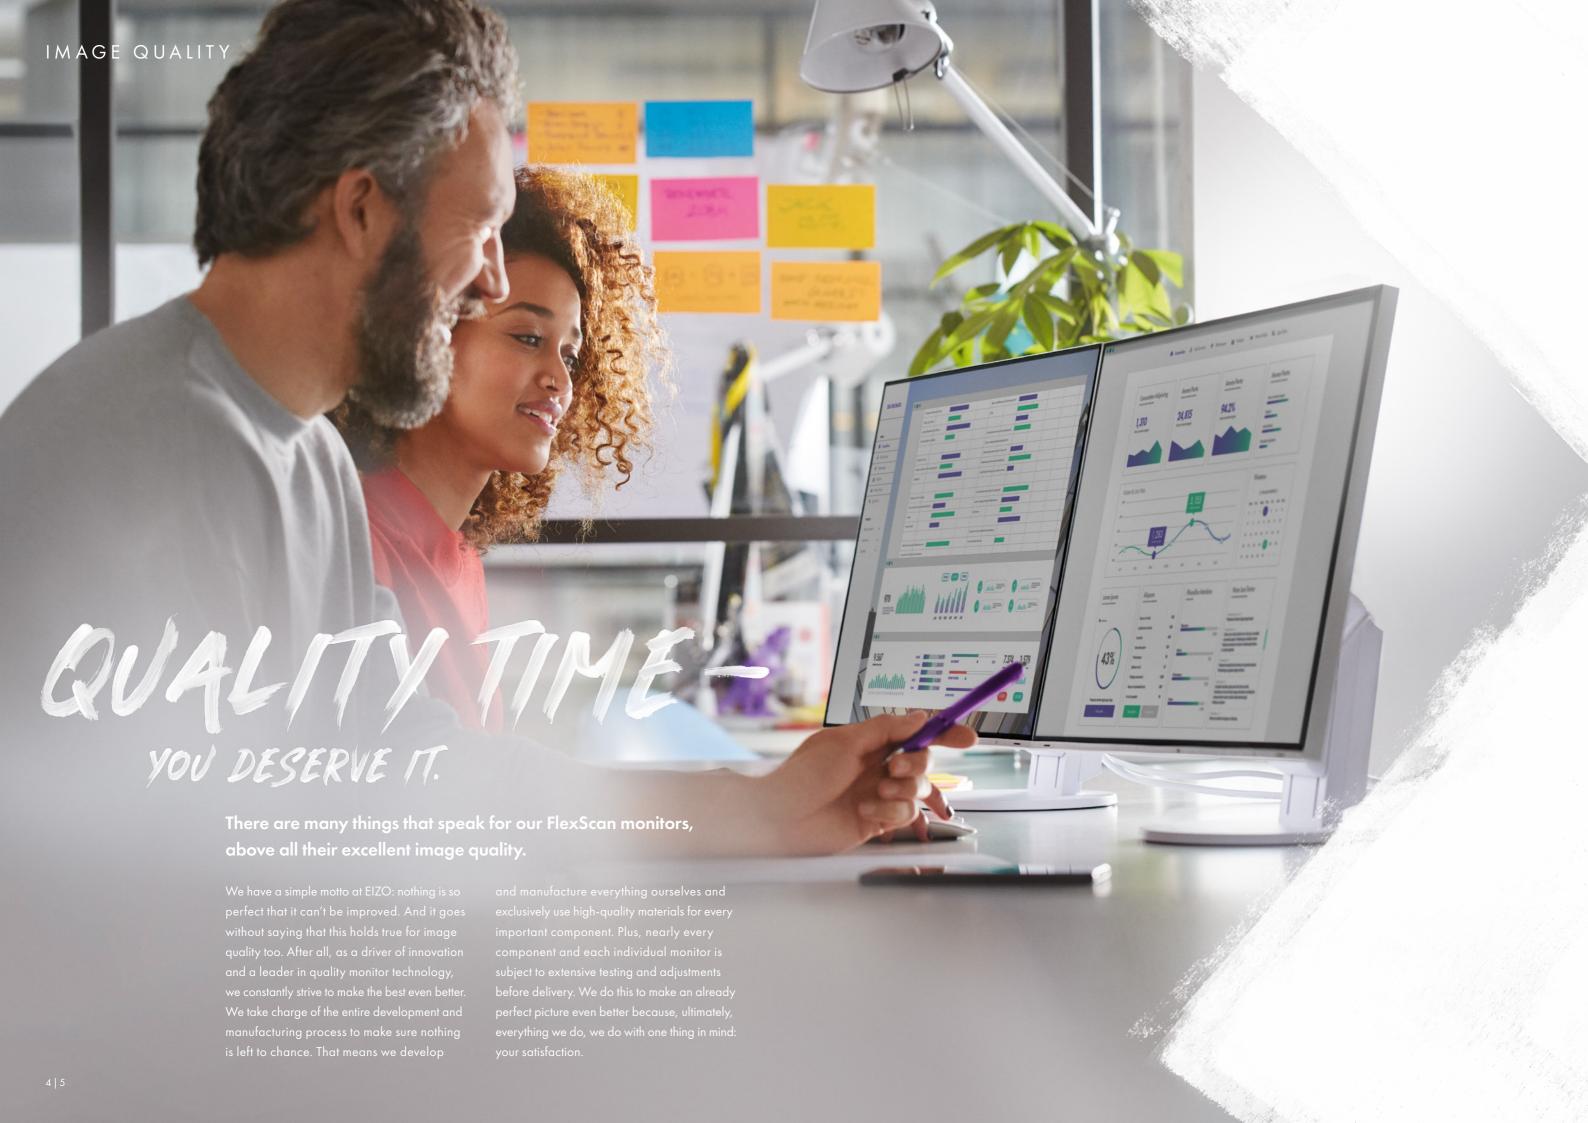

Not yet relevant

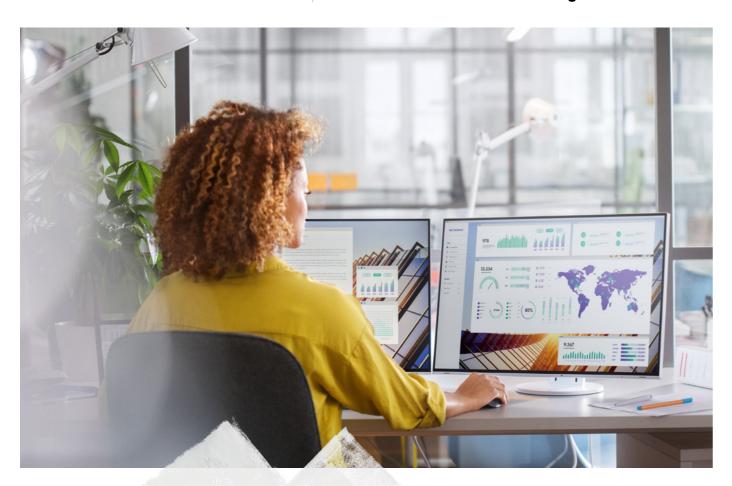

Don't know 55%

*Computerwoche, ChannelPartner, CIO and TecChannel. 'How much progress has your company made in terms of developing the workstation of the future and how does this compare to other companies?' Statista, de.statista.com/statistik/daten/studie/910623/umfrage/future-workplace-selbsteinschaetzung-von-unternehmen-zum-stand-der-entwicklung/, Accessed 5 June 2019 [in German]

WE DON'T JUST MEET STANDARDS-WE SET THEM. The best technologies for

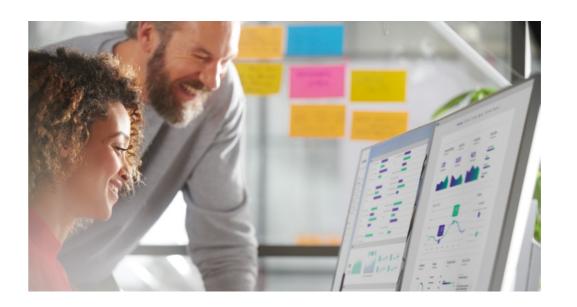

4K Resolution to ensure the highest image quality

the best image.

A 4K UHD monitor from EIZO offers you the best support in the office thanks to the extraordinary display quality created by its native resolution of 3840 x 2160 pixels. The resulting image sharpness presents texts and graphic with particular clarity and precision.

Factory adjustments and long-term tests to ensure ultimate quality

Your EIZO monitor has already gone through a lot by the time it arrives on your desk. That's because only devices that have been through the most thorough testing possible are allowed to be dispatched from our facilities – that means the colour temperature, gamma, white balance and brightness of each monitor are all carefully measured and adjusted. In addition, each monitor is inspected by the trained eyes of an EIZO employee. We also subject new products to numerous extended tests spanning thousands of hours of monitor usage time before production to be able to guarantee the lasting product and image quality expected from EIZO.

10-bit LUT: precise colour control

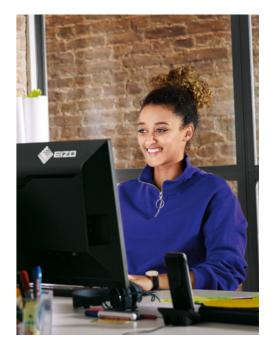

An image can only be perfect if the colours are too. This is why EIZO office monitors have a 10-bit look-up table as a minimum, which allows the colour information to be assigned much more precisely than with conventional 8-bit LUT. The finest colour gradations ensure that gradients are always perfectly displayed while also offering customised adjustment options. For example, you can adjust the white balance from 4000 K to 10000 K in 500-K intervals without any losses.

Steady viewing angle with IPS panel

The excellent viewing angle stability of the IPS panel guarantees that you will barely notice any deviation in brightness, colour, sharpness and contrast, even at a tilted viewing angle. Colours and contrasts look the same in the corners as they do in the centre of the screen.

Image processor (ASIC)

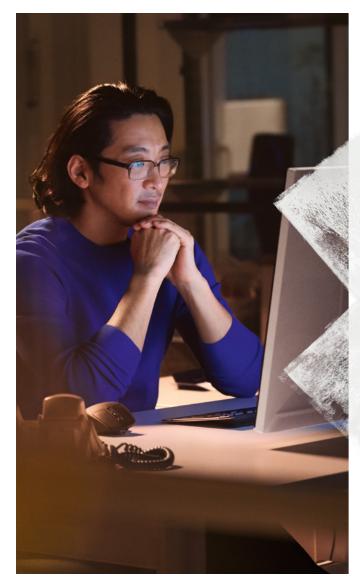

We rely on our own expertise when it comes to image processors. Our many years of experience goes into developing our own image processors (ASIC) so we are sure to get the best out of our LCD panels.

Typical monitor display with 8-bit LUT

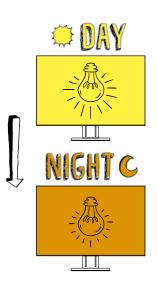

Display with 10-bit LUT

FIT EYES AS STANDARD.

EIZO monitors boast intelligent features that make sure you always enjoy a constantly perfect image and your eyes stay fitter for longer.

Auto EcoView: there's more to our monitors than meets the eye

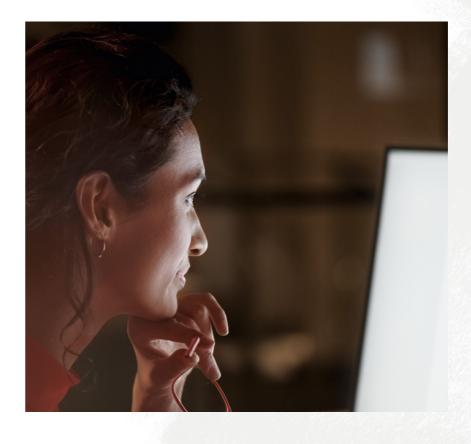

Your monitor is always in sight – and you have the perfect set-up for your eyes. All EIZO FlexScan monitors continually utilise the Auto EcoView functionality to measure the changes in the ambient lighting conditions and automatically optimise screen brightness to tackle the problems posed by lighting conditions changing throughout the day. This reduces the amount you are blinded and also prevents the monitor from being too dark in lighter environments. The Ultra-slim and 4K monitors feature a unique two-point control panel that enables

the user to set a minimum and maximum brightness level between which the monitor automatically adjusts the screen brightness.

Day or night, light or dark – the monitor sensor automatically identifies at which level of ambient light you adjust the brightness of the monitor. When the level of ambient light then changes, the adjustment you have made is used as a basis to adjust the monitor brightness accordingly. The feature is intuitive and runs in the background without the user noticing.

Automatic colour mode: optimum images at the touch of a button

Automatic colour mode allows you to assign a specific display mode to individual applications. As soon as you open an application, the screen switches automatically to the predefined mode. Whether you are surfing the web, looking at graphics in Office or using a word processor, automatic colour mode will ensure that you are always using the best setting for the task.

Paper mode: the best setting for working

Paper mode optimises the brightness, contrast and colour temperature of the monitor, simulating the experience of reading real paper. It also reduces the levels of blue light, which significantly reduces the strain on your eyes, especially if you constantly switch between looking at a monitor and looking at paper.

Hybrid control: flicker-free images, without glare

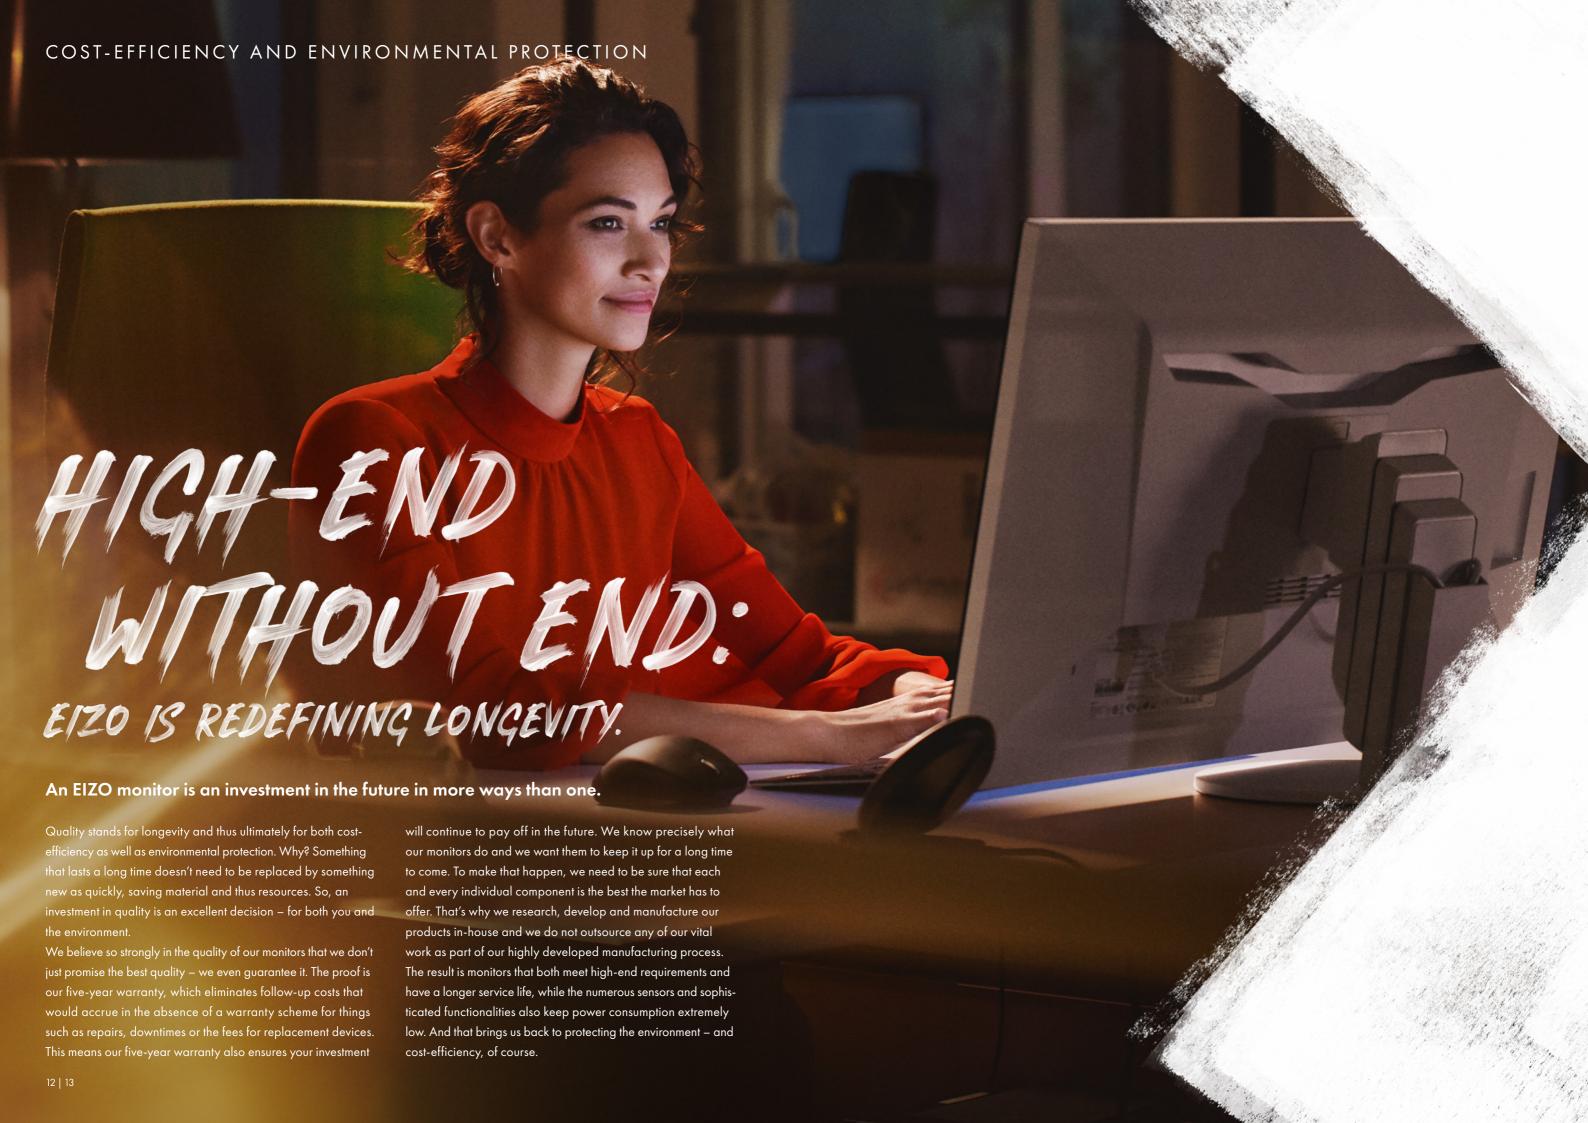

Conventional methods used to control the backlight on monitors can cause an unpleasant flickering. The EcoView series of monitors use technology developed by EIZO, meaning they flicker far less in comparison to LED backlit monitors offered by other manufacturers. Thanks to the hybrid control, you can reduce the display brightness to less than one per cent, which enables you to work more comfortably in poorly lit environments.

Figures vary slightly according to model.

Anti-reflection coating: increasing concentration by reducing reflection

All EIZO monitors are equipped with an antireflection coating that reduces the amount of distracting reflections, allowing you to concentrate fully on your work without having to adopt uncomfortable positions while sitting in front of your monitor – positions that put a strain on your neck and muscles.

PROTECT THE ENVIRONMENT WHILE YOU WORK.

You don't waste time in the office. So don't waste kilowatt hours either.

Auto EcoView: more than just an ergonomic feature

Since Auto EcoView constantly adjusts display brightness to the ambient light, you can enjoy energy savings of up to 50 per cent in comparison with a monitor operating at full brightness.

Excellent: security and environmental sustainability

Most FlexScan models meet the requirements of the TCO 8.0 display standard and correspond to strict international guidelines for ergonomics and energy conservation pursuant to EPA Energy Star and TÜV ergonomics.

EcoView Optimizer: cost savings of up to 30 per cent

EcoView Optimizer recognises image content and reduces the backlight automatically without reducing the image quality, which in turn decreases power consumption.

Does not apply to the EV2730Q and S1934 models.

Zero watts: saving energy by powering down

All FlexScan models have a mechanical power switch that results in zero-watt consumption when the monitor is switched off. But each model also uses 0.5 W or less in standby mode.

Our contribution to the Sustainable Development Goals (SDG)

As part of its corporate social responsibility (CSR) activities, EIZO is contributing towards the United Nations' Sustainable Development Goals (SDGs).

FlexScan monitors are environmentally friendly screens, with high energy efficiency, made from recycled plastics and sustainably sourced materials. The packaging is predominantly made of recycled material that can be reused in responsible recycling systems.

SUSTAINABLE GALS

LONG LIVE YOUR MONITOR.

How to not just meet the highest quality requirements, but to exceed them.

Five-year warranty. No worries.

As a result of constant research, further development and painstaking quality controls, EIZO is able to offer a five-year warranty for all FlexScan models, including an on-site replacement service* – up to three years longer than typical warranties. For you, this means the highest possible investment security and lower TCO (total cost of ownership). Although the purchase price is higher, the investment and service costs are lower with an EIZO monitor because the service life is substantially longer and guarantees zero repair costs and the associated follow-up costs that would accrue in the first five years.

Research and development

Our unique research and development department enables us to develop pioneering technologies and integrate them perfectly into our products.

Production

We manufacture our monitors ourselves by combining the latest mechanical manufacturing techniques with the most meticulous craftsmanship as this is the only way we can guarantee that our products are manufactured to the highest quality.

Quality control

We ensure that our monitors are resistant to electromagnet interference, do not emit disruptive signals and comply with international provisions in our in-house measurement laboratories. In our longevity tests, we regularly inspect the image quality of our monitors by leaving them switched on for thousands of hours.

^{*}This service is only available in some European countries. For more information visit please your local EIZO website.

Daisy chain functionality

You can use USB-C or DisplayPort to connect several monitors in series. That means only one monitor needs to be connected to the computer, while the rest are then connected to one another. If you're using the USB-C port, the monitors are all interlinked via USB data cables, which significantly reduces the number of cables trailing out of the PC.

USB-C daisy chain with the EV2795 and EV2495 models; DisplayPort daisy chain with the EV2457 model.

USB-C docking

Even fewer cables, even more freedom. Certain models that feature a USB-C port even have an LAN interface and route the network connection to the attached computer via the port. This allows the monitor to function as a docking station with all the features that come with this. Users only need to connect a single cable to the computer to transmit audio, video, data and LAN signals as well as provide charging power.

LAN interface with the EV3895, EV2795 and EV2495 models.

KVM switch

Thanks to multiple USB upstream ports available on several of our monitors, they feature a built-in KVM (keyboard, video and mouse) switch and can be used as a keyboard/mouse switch. This allows, for example, a private and a company computer to share the monitor and be operated with a single keyboard and mouse when working from home.

In short, the KVM switch ensures that work is uninterrupted and makes for a tidy work area.

Applies to the models EV3895, EV2795 and EV2495.

USB-C with power supply

Many FlexScan monitors feature a USB-C port. You can simultaneously transfer video or audio signals and data and charge a laptop or a smartphone, all with just one cable. An added plus: The monitor provides power to the USB-C port so there is no need for an additional AC adapter.

Applies to the EV3895, V3285, EV2795, EV2785, EV2495 and EV2480 models.

IMPRESSIVE FEATURES. GREATER COMFORT.

Everything you need - inside and out. Our FlexScan monitors are carefully designed down to the last detail.

Signal ports*

The rear side of the housing offers a DisplayPort, HDMI, DVI-D, D-sub and USB-C ports as well as various connections for digital and analogue signals.

Cable routing

A cable holder, clip or cable cover ensures a clean desk and prevents messy cabling, depending on the model

Cable protection

Data connection*

Each model features a USB hub with one, two or three downstream ports for peripheral USB devices.

Audio output*

The speakers are integrated into the bezel and flush with the monitor. An integrated headphone connection ensures additional comfort.

*Feature varies depending on the monitor series and the model. Please see the tables starting on page 22 for more information.

Thin Client mount

There is a Thin Client mount available as an optional accessory for several EcoView monitors. It is easy to attach to the monitor base and is suited for attaching Thin Client systems with VESA mount points.

Carry handle*

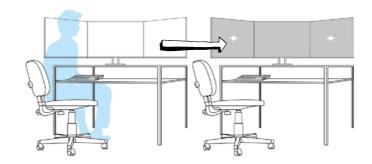

The built-in carry handle on the back of the monitor makes it easy and safe to carry the monitor when unpacking, setting up or transporting the monitor from one place to the next.

INTELLIGENT SOFTWARE FOR OPTIMAL WORK.

Screen InStyle – power consumption, colour, brightness and other settings can be easily managed for single monitor or multi-monitor solutions.

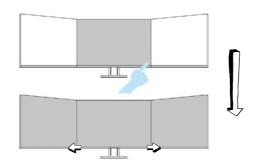

Power management with multiple monitors

Use the power button on one monitor to switch all connected screens either on or off and when monitors have a presence sensor, all monitors will automatically go into sleep mode during vour absence.

Synchronisation of screen settings

Every colour setting you select on one monitor is transferred to the other monitors to ensure consistent colouring across all monitors. The automatic brightness adjustment feature is also regulated homogeneously.

Colour briefcase: personalised settings everywhere you go

Take your personalised screen settings with you to wherever you connect your laptop or tablet to a modern EIZO monitor. Your settings are easily and automatically imported when you connect your laptop via a USB-C cable to a monitor with

Screen InStyle support. This leads to improved comfort and increased work efficiency in offices that make use of hot desking or in your home office.

Automatic colour mode

You can select specific monitor settings for individual applications. Your screen automatically switches to the colour mode you defined for the application as soon as you activate it.

Input signal and colour mode selection via keyboard

Another practical functionality is the selection of the input signal via hotkey or key combination when several PCs are connected to one monitor. This allows users to work simultaneously with a laptop and PC on a single monitor and easily switch from one to the other. Depending on the monitor, this also applies to the use of Picture-by-Picture or Picture-in-Picture. Colour mode can also be changed quickly via a key combination.

Less blue light

The Circadian Dimming functionality reduces the amount of blue light and its potential impacts by lowering the colour temperature of the monitor over the course of the day.

Administrator management

System administrators can use Screen InStyle Server, the server application, to remotely administrate monitors that are connected to a computer on which Screen InStyle is installed. This means every EIZO monitor on the network can be administered centrally, enabling power consumption to be optimised without an engineer having to physically go to each monitor, for example.

Screen InStyle is available for Ultra-slim monitors and the EV3285 and FV2785 models

EIZO Monitor Configurator – Simply deploy basic settings.

This software allows system administrators to create and distribute monitor configurations through a USB connection. To this end, a monitor's settings can be saved as an XML file and transmitted over the network to the clients for other connected

EIZO Monitor Configurator is available for Ultra-slim monitors and the EV3285 and EV2785 models

WORKING WITH THE BEST. Well-know the world in

Well-known companies around the world rely on EIZO's FlexScan monitors.

Products used: FlexScan EV2450 and EV2750

trivago, the world's largest hotel search platform, was on the lookout for an all-inclusive solution for the almost 2,100 employees at the company's new headquarters in Dusseldorf, Germany. Our FlexScan monitors impressed during extensive in-house tests with their outstanding quality and wide range of features, which is why the hotel search platform decided to purchase 1,550 FlexScan EV2450 monitors and 450 FlexScan EV2750 monitors. Every trivago employee now has two FlexScan EV2450 monitors on their desk. An EV2750 model is also available for special requirements such as data monitoring.

Product used: FlexScan EV2795

In order to enable its employees to work on the move, regardless of location, the municipal services company NEW is equipping its new "Modern Workplaces" with the EIZO FlexScan EV2795 model, which can also be used as a docking and charging station thanks to its USB-C port. All workplaces are to be equipped accordingly by 2022. More than 1800 EV2795 monitors will then be in use.

OUR ENTIRE RANGE.

EIZO offers monitors for a wide variety of industries and application areas. While our FlexScan monitors are particularly suited for office use, other work areas require quite different specialisations.

ColorEdge

The EIZO ColorEdge series was developed specifically to meet the high requirements of creative users who work with photos, films and graphics. ColorEdge monitors are the specialists when it comes to colours, calibration and precision. They guarantee an unadulterated look to the files and make it possible to work with total colour accuracy.

CuratOR & RadiForce

CuratOR from EIZO offers complete medical solutions for modern operating theatres. RadiForce series of medical monitors meet the high requirements demanded by the fields of diagnostics and medical review.

DuraVision

The durable and reliable DuraVision monitors are best-suited to 24-hour operation and are used in maritime and industrial environments, as well as security and surveillance systems.

Raptor & Re/Vue

EIZO offers the most comprehensive range of monitors, recording and streaming solutions and graphics boards for air traffic control centres and towers, as well as training and simulation equipment for air traffic controllers. The numerous configuration options meet the requirements for any installation.
